

## **Project Report EDAG01 Efficient C 2022**

Jonas Skeppstedt

December 8, 2022

### **Purpose of the report**

The report should explain the results of your performance analysis of your intopt program.

- More than one A4 page is rarely needed.
- Mail it to `jonas.skeppstedt@cs.lth.se`
- Using profiling information, explain what takes time in your program and why.
- Explain which optimizations were most useful — but note that it is sufficient to get a score of 80 and if you achieved that without doing any optimization, you don't have to write anything for this item.
- Speculate what you could do to try to improve the performance further.
